

ANNIE EDNEY MCA
Artist Bio 2019

Annie Edney's practice is underpinned by her enduring theme of our human relationship with the planet, developed across 25 years creating large scale site-specific community celebrations.

Now expressed in organic analogue video and projection, Edney is investigating the many influencing factors of her theme. She is currently exploring the idea that we hold all of our ancestors memories in our DNA.

This research began with a biophysical exploration of our human relationship with earth energy at a cellular level, investigating how we assimilate external factors emotionally.

Edney's videos record the interaction between light, liquid and colour, with improvised movement incorporated; sometimes human dancers, sometimes organic natural found objects.

She also draws a lot.
